2 Since a Folder Action is “attached” to a folder in the Finder, its input is files and/or folders added to the target folder.. This unique macOS feature is integrated into Automator as a workflow template: 1 The Folder Action workflow window.. Folder Actions are saved as workflow files, instead of applets, and are executed by the system “FolderActionsDispatcher” background process.. Example: Auto-Photos Import via AirPortHere’s an example of combining the use of an Automator Folder Action workflow with an AppleScript “Watcher“ applet to create an autonomous AirDrop image repository whose content is added to by others through a non-attended import process triggered when users AirDrop images to the unmanned host computer.
